

The Program on Governance
and Local Development

THE LOCAL GOVERNANCE PERFORMANCE INDEX (LGPI)

The LGPI provides a new approach to the measurement, analysis, and improvement of local governance. It is a tool that aids in the **collection, assessment, and benchmarking** of local governance and service delivery, using surveys to detect important, local-level variation.

Key Elements of LGPI

1. Employs a methodology of clustered surveys at village level allowing for measures of local variation undetectable in most surveys.
2. Focuses on direct behavioural measures.
3. Covers multiple sectors, enabling us to see relationships between governance and outcomes across sectors, such as education, health, livelihoods, and security.
4. Provides a detailed map of citizen experiences with governance and service delivery.
